

Fairy Lantern Supplies and Instructions

Supplies

Lantern

Vine covered wire

Moss

Fairy

Miniature lights

Wire cutters

Scissors

Glue gun

Twigs

Break the stick into 3 pieces of the same size and glue together. Add two smaller twig pieces to each end as anchors. Dot with glue and add moss.

- Step 2** Cut 2 strips of vine 12" to 15" long depending on the height of the lantern top and where you would like the swing to land.
- Step 3** Lay the strips out lengthwise and center the swing in the middle with the vine on the inside of the anchors. Bring each strip up and twist together on the top of the base.
- Step 4** Glue the fairy on top of the swing between the vines.
- Step 5** Cut another piece of vine to tie through the opens on the lid of the lantern and tie the ends together in the front to form a knot. This is where you will hand your swing
- Step 6** Tie the vines holding the swing around the vine anchored at the top of the lantern and adjust the height so the swing is in the middle of your lantern and can easily be seen. Twist to tighten.
- Step 7** Add your plants, add moss, and lights if you choose.
